## Innovative Shockwave Solutions and more

Dedicated to providing physicians worldwide with innovative high-technology devices.

DirexGroup marks over 35 years of high technology innovation during which we have offered advanced and unique therapeutic technologies with shockwaves. Since the groundbreaking introduction in 1986, of the world's first modular and compact SWL system, further innovations have been introduced to the market including:

- Linear Shockwave Therapy for Erectile Dysfunction
- Low Intensity Shockwave Therapy for Diabetic Foot Ulcer
- Dual-head shockwave lithotripsy
- Stationary patient SWL with Integra, incorporating In-line and On-line fluoroscopy

To date, thousands of such devices have been installed in over 70 countries worldwide. These units are supported by trained and experienced service professionals.

# MORENOVA<sup>ED</sup>

## Dual Linear Shockwave Therapy

Erectile Dysfunction is a frustrating condition which commonly increases with age due to poor blood flow. Experts say this affects over 50 percent of men between the ages of 40 and 70. Unlike other current treatment options for ED, Linear Shockwave Therapy is unique in that it aims to restore the erectile mechanism in order to enable natural or spontaneous erections.

Patented MoreNova<sup>ED</sup> improves ease and comfort of applying Linear Shockwaves for ED treatment, originally introduced by Renova (see MoreNova model movie on Direxgroup website). The reconfigured model includes dual channels for coupling energy to treated regions. Soft-locking of penile shaft assures accurate positioning and stable energy coupling.

### Treatment Protocol:

MoreNova<sup>ED</sup> comes hand-in-hand with short protocols including a full treatment cycle in a single week. The severity of ED will affect the number of sessions required. Treatment sessions last for fifteen minutes are non-invasive and anesthesia-free.

### Main Features:

- ➔ Seated patient
- ➔ Simple treating head positioning
- ➔ No manual holding of shaft and/or applicator

# MORENOVA<sup>ED</sup>

MoreNova<sup>ED</sup> offers quick, painless therapy using low-intensity linear shockwaves creating Neovascularization which stimulates angiogenesis, the formation of new blood vessels. Improving blood flow to the region is a significant contributor to erectile function. Treatment consists of non-invasive, low-intensity sound waves that pass through erectile tissue, restoring natural erectile function by the growth of new blood vessels. The treatment treats the underlying cause and not just the symptom.

### Major Advantages:

- ➔ Non-invasive and anesthesia free
- ➔ Short protocol and painless treatment
- ➔ Full coverage of treated area with dual applicators
- ➔ Comfortable for User and seated Patient
